No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                 2750

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 10
T31506
hypothetical protein F5E19 80 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 18-Aug-2000 #sequence_revision 18-Aug-2000 #text_change 09-Jul-2004
C;Accession: T51506
R;Sato, S.; Maneko, T.; Kato, T.; Asamizu, E.; Kotani, H.; Tabata, S.; Mew aubmitted to the Protein Sequence Database, August 2000

"Generation and initial analysis of more than 15,000 full-length human membrane vesicles (By similarity).
--- TISSUB SPECIFICITY: Retina. Bxpressed throughout the horizontal calls or more specifically at the terminals.
---- SIMILARITY: Belongs to the amino acid/polyamine transporter family Nakai K., Yada T., Nakamura Y., Chara C., Isogai T., Sugano S.; "Complete sequencing and characterization of 21,243 full-length human comparative analysis of human chromosome 20."; -!- SÜBCELLULAR LOCATION: Integral membrane protein. Intracellular Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002). Nat. Genet. 36:40-45(2004). and mouse cDNA sequences." "The DNA sequence and co Nature 414:865-871(2001) TISSUE SPECIFICITY. SEQUENCE FROM N.A. SEQUENCE FROM N.A. Rogers J.

libraries...;
Submitted (JUN-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Involved in the uptake of GABA and glycine into the synaptic veet.cles (By Similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein. Intracellular membrane vest.cles (By similarity).
-!- SIMILARITY: Belongs to the amino acid/polyamine transporter family II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Osada N., Hida M., Kusuda J., Tanuma R., Iseki K., Hirai M., Terao K.,

Expressed at high levels within the neocortex, hippocampus, cerebellum, striatum, septal nuclei and the reticular nucleus of the thatamus. Also expressed in islets where it is more abundant in the peripheral/mantle region. SIMILARITY: Belongs to the amino acid/polyamine transporter family
